KAVIYA M

Chennai, Tamil Nadu | 8778591045 | kaviyamani711@gmail.com | LinkedIn Profile

CAREER OBJECTIVE

Motivated Electronics and Communication Engineering student seeking an Embedded Systems / ECE internship to strengthen practical knowledge of electronics, microcontrollers, and embedded applications. Eager to learn from experienced engineers, contribute to real-world projects, and develop reliable problem-solving and technical skills. Also building foundational web development skills.

EDUCATION

B.E. — Electronics and Communication Engineering
Loyola Institute of Technology, Chennai
Expected graduation: 2028

Class XII — 81%
St. Mary's matriculation higher secondary school.

Class X — 83.6%
Bharathi vidhyalaya maticulation higher secondary school

TECHNICAL & PROFESSIONAL SKILLS

Web technologies: HTML, CSS, JavaScript (currently learning)
Productivity: MS Office
Professional: Communication, willingness to learn

PROJECTS

Anti-Sleep Detection System

The Anti-Sleep Detection System is an intelligent safety system designed to detect driver drowsiness and help prevent road accidents. It monitors the driver's eye movements and alertness to identify signs of sleep or fatigue. When drowsiness is detected, the system activates an alert, such as a buzzer, to warn the driver and improve road safety.
Technologies Used: Arduino, Sensors, Embedded Systems, and C/C++
Project Objective: To develop a cost-effective safety system that improves driver alertness and helps prevent accidents caused by drowsiness.
Domain: Embedded Systems | Electronics and Communication Engineering | Road Safety

Smart Helmet and Rover-Based Underground Mine Safety System

Developing a smart worker safety system that integrates GPS-enabled helmets with a mobile rover for underground mine monitoring. The helmets are designed to track the locations of approximately 10 workers and share their GPS data with the rover. The rover monitors environmental conditions such as toxic gas levels, temperature, and humidity to help identify potential hazards. The system aims to improve worker tracking, emergency awareness, and safety in underground mining environments.
Technologies: Embedded Systems, GPS, Sensors, IoT, ESP32 (if used).

Personal Portfolio Website

- Created a personal website to present profile information, skills, projects, and contact details.
- Used HTML and CSS and am learning JavaScript to improve interactivity and design.

CERTIFICATIONS & ACHIEVEMENTS

- Developed an Anti-Sleep Detection System as an academic project.
- Worked on a Smart Helmet and Rover-Based Underground Mine Safety System concept.
- Created a personal portfolio website using HTML and CSS.
- Participated in technical events, hackathons, or paper presentations, if applicable

ADDITIONAL INFORMATION

Internship interest: Embedded Systems / Electronics and Communication Engineering
